

Spark plug cables and sets made accordingly to ISO 3808/1 + 3808/2

## Matching Quality

In accordance with the new EU regulations 1400/2002 concerning use of alternative (to OEM) spare parts and still be able to maintain the guarantee as if OE spare parts were used, please note that at the moment (March 2004) most of the products available from the EURO-CABLE brand, do correspond with OE spare part Quality.

This means that we for instance, supply Wire Wound cable to the same OEM specifications (or superior) as the car was originally fitted with, unless the customer does request other quality.

Consequentially we keep the same policy for other specifications, for example where Copper Core is used together with connectors using build in resistance or not, we offer matching quality to the OE spare part.

Again, when OE use Static Suppressed conductor, so do we, when OE use 5mm, 7mm or 8mm outer diameter, so do we....

With the wide range of High Tension Ignition Leads and Lead Sets available from Eurocable AB your company and your customers will have a big advantage against all other manufacturers of High Tension Ignition Leads and Lead Sets available.

In addition to the Quality and wide range of products available from Eurocable AB you will probably find the price structure to be a further stimulating advantage to your business.

*EUROCABLE AB 2004.  
Matching quality*
